

GAETANO TROVATO

Gameplay / Systems Programmer (Unity & Unreal Engine)

0754-333-5236 | [Email](#) | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

- › **Languages:** C#, C++
- › **Engines:** Unity, Unreal Engine, UEFN
- › **Architecture:** MVC, MVVM, Dependency Injection, Reactive programming
- › **Async & Tools:** UniTask, UniRx, Tween
- › **Other:** ASP .NET, Entity Framework

»» Professional Experience

Programmer

[Lively](#) May 2024 - Jul 2024

- › Contributed to **Super Horde Survival**, multiplayer title launched on UEFN platform, through the creation of an efficient and scalable data-driven system for abilities and passives.

Junior Programmer

[Lively](#) Sep 2022 - Apr 2024

- › Participated in porting **Warped Kart Racing** to Apple Vision Pro, adapting UI systems and screen-space interaction for 3D environments.
- › Updated project building process to meet platform certification requirements for **Warped Kart Racing** port to Apple Vision Pro
- › Improved tutorial flow and card unlocking systems for the Unity Web3 title **Parallel**, enhancing player onboarding structure.
- › Implemented a network-ready painting system affecting both player characters and environment assets.
- › Added assisted-aim accessibility feature to improve usability and player inclusivity.
- › Designed and implemented a modular 3D node-based progression system using Scriptable Objects, enabling branching content paths and designer-friendly iteration.
- › Architected MVVM-based UI framework to display level metadata and progression state cleanly and dynamically.
- › Expanded internal debug tooling to accelerate feature testing and reduce iteration time.

Programmer Internship

[Lively](#) Jul 2022 - Sep 2022

- › Built MVVM-based UI system for clear presentation of characters statuses and damaging numbers using reactive programming architecture for unreleased Unity auto-battler gacha RPG.
- › Expanded project ability system for unreleased Unity auto-battler gacha RPG.

»» Selected Projects

Prototype Vampire Survivor-like

[Unreal Engine 5](#) | [C++](#)

- › Developed a local multiplayer survivor-like game in Unreal Engine 5 powered by a scalable and optimized data-driven system of abilities using the Gameplay Ability System plugin combined with dynamic and event-driven UI using the MVC pattern.

The Boss is Waiting (Prototype Platformer)

[Unity](#) | [C#](#)

- › Built a local platformer prototype in Unity from ground up, using state-machines for both animations and enemy behaviour.

M.Sc. Video Game Development

[Birmingham City University](#)

- » Implemented concurrency-based time-loop mechanics and inventory system in Unreal Engine (C++).
- » Built level import system for improved iteration workflows from Tileset2D to Cocos2Dx (C++).

Pg.D. Computer Science

[University of Edinburgh](#)

- » Focus on distributed systems, parallelization and software architecture.

B.Sc. Computer Science

[University of Studi di Milano-Bicocca](#)

- » Strong foundation in C#, C++, Java, networking, and system optimization.
